The DeltaGrip®System A Revolutionary Alternative to

Welding Metal Deck

ASC DeltaGrip® System

A revolutionary structural side seam attachment system for steel roof and floor deck applications.

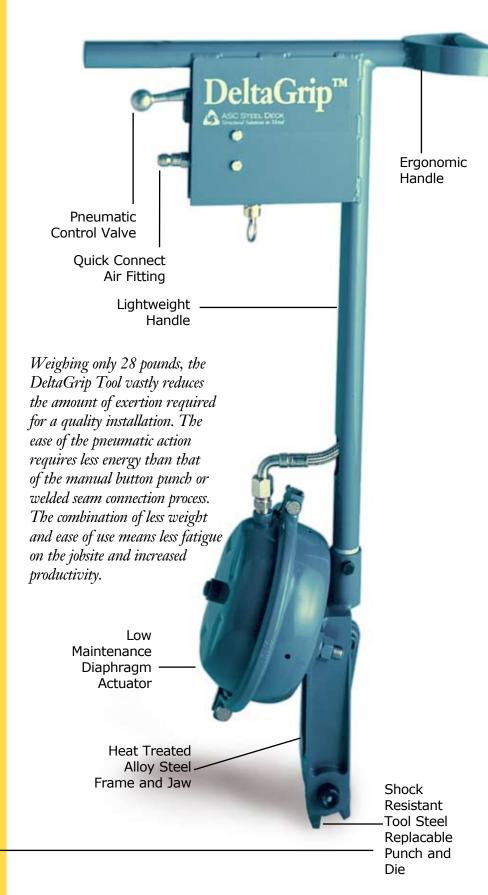

The ASC DeltaGrip System

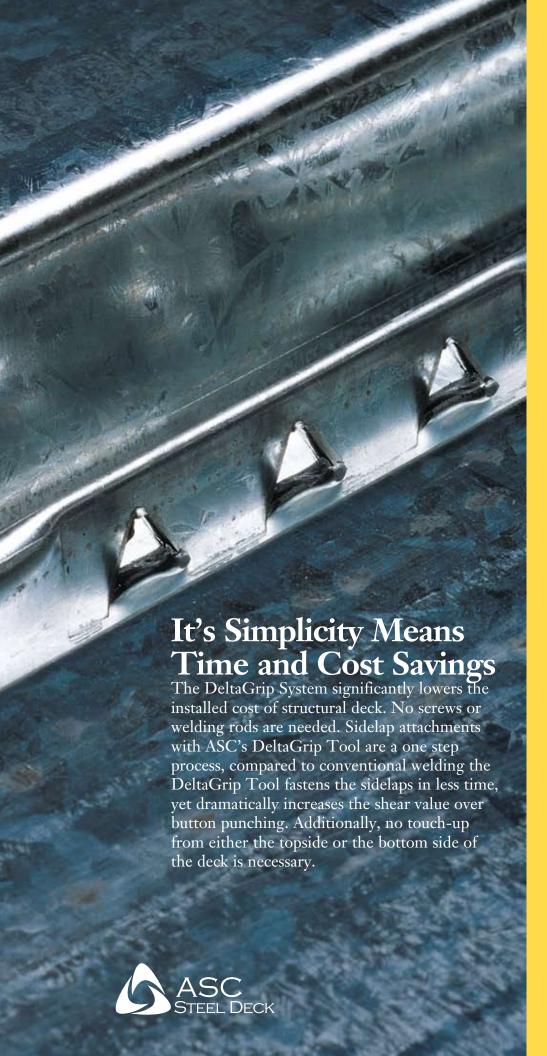

As part of an ongoing effort to keep steel construction competitive, ASC Steel Deck introduces its exclusive ASC DeltaGrip seam attachment system. This revolutionary system eliminates the need for welding. Additionally, the easy-to-use DeckGrip interlocking tool provides high shear values not attainable by button punching while weighing only 28 lbs.!

The powerful, lightweight pneumatic DeltaGrip tool fastens the sidelaps of the interlocking steel roof or floor deck with a highly effective triple punch through three layers of steel. The results of this interlocking system are as permanent and durable as a seam weld. As part of the ASC DeltaGrip system, the DeltaGrip tool resists longitudinal movement and vertical separation when subjected to wind, seismic or construction loads.

The ASC DeltaGrip® System & the DeltaGrip Tool

The Quality Assurance of the ASC DeltaGrip® System

Engineers can rest assured the DeltaGrip System was developed with quality control in mind. Inspection is a snap due to the easy top access of the triple punch and the go/no go gauge that insures the best quality installation. Punches are consistent, accurate and strong from the first attachment to the last, regardless of the operator's size or strength. When installed properly, the finished seam is stronger and more positive than button punches, screwed sidelaps and top seam welds.

Tested and Proven Durability

Developed through full scale testing, DeltaGrip's interlocking tool performs on 22 gauge through 16 gauge steel deck. The DeltaGrip System has been tested for spans from 4'-0" to 12'-0". It is most effective on ASC's DGB-36 Roof Deck and may be applied to DGN-24, 3W, 2W and the cellular versions of each ASC profile mentioned.

Safety Matters

The DeltaGrip Tool has the advantage of being safer than the welding process so there is less likelihood of loss time injuries on the job. No fumes are emitted. The DeltaGrip Tool eliminates the potential of fire in welding, therefore the costs for fire-hazard-reduction observations do not exist.

Advantages of The DeltaGrip® System & Tool

Positive visual

inspection: Easily inspected from the topside of the deck

Durable: Stronger than a top seam weld Economical: Lowers the installation cost

Pneumatic

Action: Minimal effort required to operate
Inclement Installation not effected by inclement

weather: weather Lightweight: 28 lbs.

Effective: Use on ASC Steel Deck's DGB-36, DGN-24,

3W, 2W and Cellular versions

Fully tested: Developed through full scale testing

ICC Evaluation: ESR-1414

City of

Los Angeles

Research Report: RR23783

Installed Rate: Seven times faster than seam welds.

DeltaGrip Tool Specifications

Capacity: 22 to 16 gauge Air Inlet: 3/8" NPT

Min. Hose Size: 3/8"

Pressure Required: 80 psi to 140 psi (depending on deck gauge)

Weight: 28 lbs.
